DETAILED ACTION

Allowable Subject Matter

1. Claims 6-11 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 and rejected under 35 U.S.C. 103(a) as being unpatentable over Goo (5,677,215) in view of Guterman (4,422,092) further in view of Wen et al. (5,825,069)

Regarding Claims 1-4, Goo discloses a method of fabricating a nonvolatile semiconductor memory device where in Fig. 4, n+ heavily doped region 18b is situated inside the p+ heavily doped region 19 which is situated on the substrate 10. Another heavily doped n+ region is formed on the substrate 10. The doped regions 18a, 18b and 19 are adjacent are situated on the source and drain regions of the gate 17 and adjacent to each other via lightly doped region 13. Goo fails to disclose the required plurality number of heavily doped regions and the required diode formation structure. However, Guterman discloses a high coupling ratio electrically programmable ROM where in Figs. 2 and 3, the required plurality number of heavily doped regions are disclosed.

Art Unit: 2826

Furthermore, Wen et al. disclose a high-density semiconductor read-only memory device where in claim 4, the required diode formation is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required plurality number of highly doped regions and the required diode formation structure in Goo as taught by Guterman and Wen et al., respectively, in order to have a ROM structure with better functionality.

Also regarding Claims 1-4, Chen et al. reference is included as related art.
